Why develop for Microsoft Viva?

Build applications on Microsoft Viva that extend the reach of your solutions

Build with familiar frameworks like SharePoint Framework and Adaptive Cards

Share your app across Viva and Microsoft 365 to expand your reach

Get more out of your M365 subscriptions by engaging employees in new Viva experiences

Common use cases

Create adaptive card extensions for your app and let SharePoint Framework ensure they operate on multiple M365 surfaces.

Automate the import of raw query data from Viva Insights into Power BI and build custom templates that are routinely refreshed to provide the most current data.

Add client-side SharePoint Framework web parts with preconfigured entries for specific scenarios to customize Viva Topics pages.
